

Multi-zone systems

**Comfort.  
Everywhere. Anytime.**

**TEMPSTAR**  
CANADA

*A division of Carrier Canada since 50 years*

## A history of innovation

On July 17, 1902, young engineer Willis Carrier designed the first air-conditioning system after realizing that water could be used to remove moisture from the air. Little did he know that this invention would lead to the creation of an industry essential to the productivity of workers and the personal comfort of our homes. He obtained a patent for this design in 1904 and founded the Carrier Engineering Corporation in 1915.

But Willis Carrier's greatest innovation was undoubtedly the centrifugal refrigeration device, more commonly known as a chiller, which extended the use of air conditioning beyond commercial applications to the systems we see installed in the vast majority of homes today.

This drive to keep coming up with innovative ideas has kept Carrier at the forefront of the industry for over 100 years, pursuing excellence in heating and air conditioning for homeowners around the world. Our products have changed lives, and our commitment to technological excellence sets the industry standard today.

# Treat yourself to absolute comfort, summer and winter alike!

## Flexible, robust technology for superior performance

TEMPSTAR Canada's Multi-zone systems offer unparalleled comfort capabilities, ideal for meeting the challenges of our Canadian climate. Thoughtfully designed for our wide temperature swings, TEMPSTAR's high-efficiency heat pumps let you enjoy superior "High Heat" technology, providing a cool breeze on hot days and a sensation of gentle warmth when the cold sets in. No matter what Mother Nature throws at you.

TEMPSTAR's ductless systems offer you reliable performance at temperatures ranging from -30°C to 50°C.

High-performance, silent and energy-efficient, Multi-zone from TEMPSTAR Canada offer a wide range of certified products to help you create a perfectly controlled environment, for any season, in any room. Whether you're planning an extension or a conversion, whether you're looking to garage, veranda, attic or cellar, TEMPSTAR Canada's ductless Multi-zone systems can be easily integrated into even the most inaccessible areas. Thanks to the many options available, their thanks to their compact design and flexible installation, our specialists can offer you a customized comfort solution, whatever your space and project.

HEAT UP TO -30°C

UP TO 10 YEARS WARRANTY HASSLE FREE PARTS AND LABOUR

# Industry-leading energy savings

TEMPSTAR Canada heat pumps are designed to be super energy-efficient, with features like our totally silent variable-speed compressors that use energy only when it's needed, and intelligent technology to optimize performance by automatically selecting the appropriate cooling phase and fan speed as needed. At the same time, these technologies minimize temperature variations and provide continuous cooling and heating comfort.

The high energy efficiency of our systems helps to significantly reduce your electricity bills while minimizing your carbon footprint.

## Worry-free warranty for up to 10 years on all parts and labor

TEMPSTAR Canada Multi-zone Series equipment offers peace of mind with a no-hassle™ up to 10-year limited replacement warranty during which we promise to replace your unit in the event of compressor, coil, or air exchanger failure. This warranty enhances your protection, adding to a 10-year limited warranty on all parts and labor.\* So you can enjoy long-lasting comfort and a high-performance system, knowing you're fully supported in the event of the unexpected.

\* See warranty certificate for full details and exclusions. Timely registration is required to benefit from the 10-year limited warranty on parts. The limited warranty period is five years for parts if registration is not completed within 90 days of installation, except in jurisdictions where warranty benefits cannot be conditioned on registration. In order to benefit from the hassle-free warranty, the owner must provide proof that adequate preventive maintenance has been carried out annually by a certified contractor.

R454B

## A commitment to the future!

Less than three decades ago, global concerns about ozone depletion led to a major shift in refrigerants used for heating, air conditioning and refrigeration. Meetings were held, laws were changed and, in the early 2000s, TEMPSTAR switched to R-410A refrigerant, becoming one of the first HVAC manufacturers to fully adopt a more environmentally responsible refrigerant.

Today, as global concern over global warming continues to grow, most nations, including Canada, are adopting stricter regulations on the global warming potential (GWP) of refrigerants. That's why, for all our residential and light commercial products, whether ducted or unducted, we're fully committed to a new refrigerant designed to keep you comfortable at all times by considerably reducing its impact on global warming: **R-454B**.

With the adoption of R-454B, TEMPSTAR Canada proudly demonstrates its commitment to preserving the environment. This refrigerant reduces global warming potential by 75% while retaining the properties ozone-depleting properties R-410A.

## Proudly certified Energy Star Cold Climate

### About ENERGY STAR®?

ENERGY STAR® is the symbol officially recognized by the Canadian government for energy efficiency. The ENERGY STAR Blue Label® provides simple, credible and unbiased information that consumers and businesses can use to make informed decisions.

All TEMPSTAR Products bearing the ENERGY STAR label® are independently certified to meet strict energy efficiency standards. Thousands of manufacturers and retailers work with the EPA (Environmental Protection Agency) to manufacture and sell these products.

### Why ENERGY STAR®?

TEMPSTAR heat pumps bearing the ENERGY STAR label® are independently certified to save energy, reduce costs and protect the climate. Rather than generating heat, they transfer it, using up to 60% less energy than standard domestic electric radiators. What's more, ENERGY STAR® certified systems avoid, on average, more than 2,000 kg of greenhouse gas emissions over the course of a year lifetime, compared with standard systems.

### Certification for cold climates

When you buy an ASHP heat pump certified ENERGY STAR® for cold climate, you can be sure that your system will deliver the performance and energy efficiency you expect, even on the harshest winter days.

ENERGY STAR certification® for Cold Climate requires independent low-temperature performance testing, testing ASHPs down to 5°F (-15°C). This evaluation ensures that your heat pump will provide all the heat needed to keep your home comfortable all winter long. Although your cold climate ASHP will continue to operate at temperatures below 5°F (-15°C), combining it with a backup energy source will optimize heating efficiency when temperatures drop even further.

Our TEMPSTAR-certified experts will work with you to determine the unit's ideal capacity and possible integration with an auxiliary heating system suited to your home.

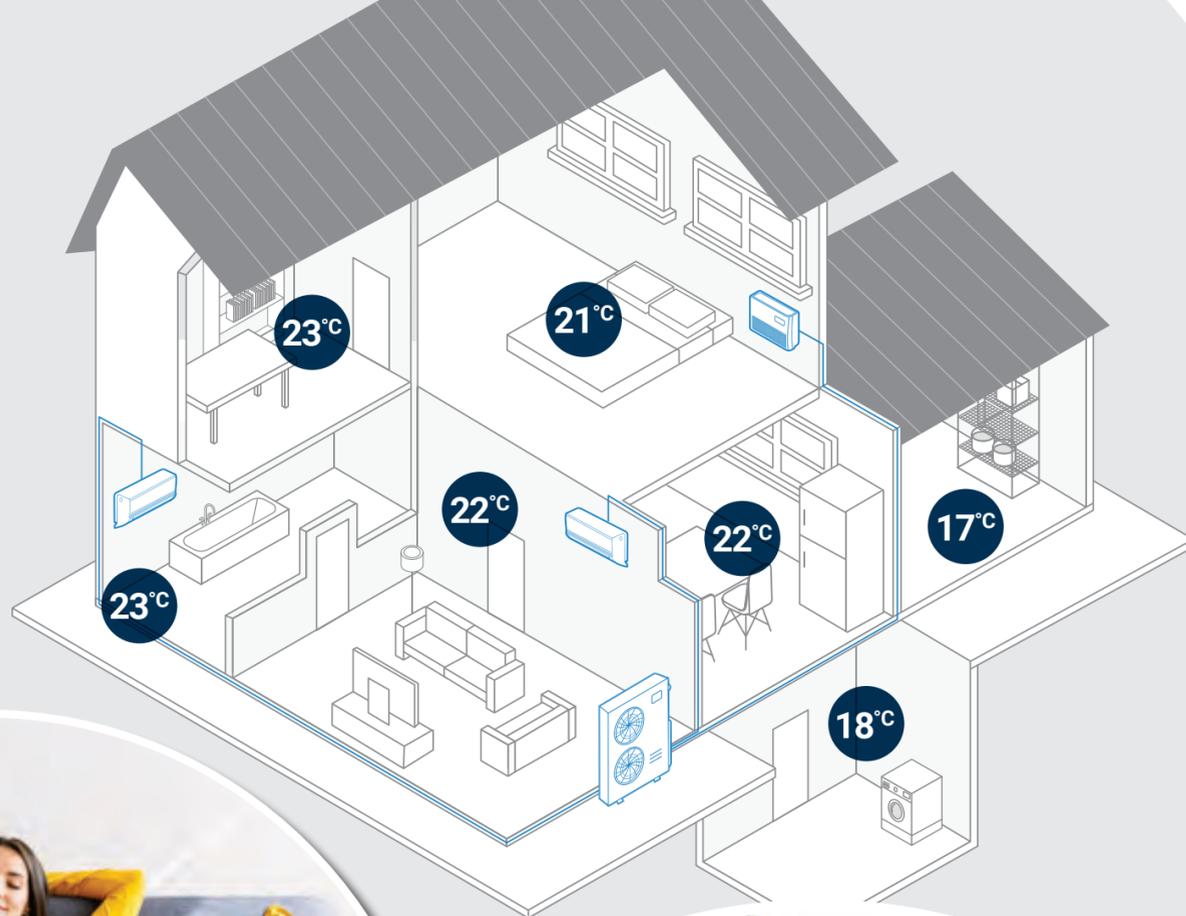

### Real impacts

Since 1992, ENERGY STAR and its partners have helped Canadian families and businesses to :

- Save 5 trillion kilowatt-hours of electricity.
- Avoid over \$500 billion in energy costs.
- Reduce greenhouse gas emissions by 4 billion metric tons.

# The personalized comfort of MULTI-ZONE systems

Connect up to six indoor units to a single outdoor unit for individually tailored temperature control in every room of your home. Often referred to as "ductless blocks", these systems work by connecting indoor and outdoor units via flexible, easy-to-install refrigerant tubing just about anywhere. All you have to do is set the ideal temperature for each zone, and the system will adjust it silently and autonomously for perfect comfort, room by room, independently.

## More options, more versatility

To enable you to modulate comfort zones according to needs, usage, space and the TEMPSTAR Canada offers a wide selection of indoor units and accessories to meet the specific needs of your home.

This flexibility makes it possible to meet individual comfort needs, while optimizing energy efficiency and space on your electrical panel.

TEMPSTAR Canada's Multi-zone systems are ideal for homes with multiple floors, glassed-in or frequently closed rooms, or for special configurations that don't allow air to circulate well throughout the house. Because air is moved only where it's needed, no energy is wasted circulating air through ducts.

### Adapted and constant heating

Enjoy uninterrupted, tailored comfort, even during winter nights. Thanks to advanced technology, the temperature remains stable, according to your needs, for optimum well-being in every season.

### Control humidity

TEMPSTAR systems Canada ensure effective dehumidification, even in hot, humid weather, for healthier, more pleasant air in your home.

### Breathe easier

Breathe easier thanks to better indoor air quality. Our built-in reusable filters effectively eliminate odors, allergens and pollutants for cleaner, fresher air and lower maintenance costs.

### Reduced noise levels

When noise is a concern, TEMPSTAR Canada's ductless Multi-zone systems are the ideal solution. The indoor units are remarkably quiet. No compressor is installed inside.

### Remote access and control

All systems offered by TEMPSTAR Canada can be combined with a complete communication system with the following functions Wi-Fi® for remote access and intelligent comfort management.

## A more easy to install, easier to maintain

Removing the top panel of the outdoor units gives immediate access to the control compartment, allowing a single operator to operate the unit service technician to check that the unit is working properly. The coils can be quickly cleaned from the inside using a pressure hose and detergent.

On all indoor units, the new removable fan and "Hood" style hood make maintenance and servicing less complicated. What's more, thanks to new filters that are easy to use and clean, service and maintenance costs are reduced.

All our wall-mounted systems are now equipped with a comprehensive self-diagnostic system for easy troubleshooting.

## Multi-zone outdoor units

TEMPSTAR Canada offers the most complete and reliable range of ductless products developed specifically for the Canadian climate. Fully converted to R-454B refrigerant, we have designed a range of energy-efficient products with the lowest global warming potential lowest of all products available on the market.

## Flexible and robust

TEMPSTAR Canada technology lets you connect **up to six indoor units to a single outdoor unit**, reducing the number of outdoor units required to a minimum.

### D5CMHAH-18CAK

- Unit can supply up to 3 indoor zones
- 18,000 Btu/h
- 95% capacity at -15°C

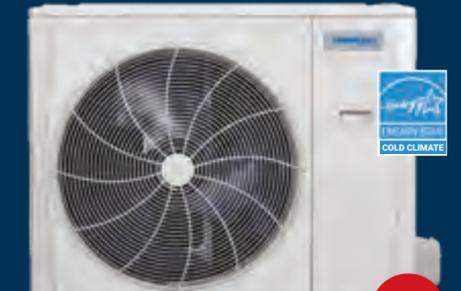

### D5CMHAH-30EAK

- Unit can supply up to 5 indoor zones
- 30,000 Btu/h
- 116% capacity at -15°C

### D5CMHAH-36EAK

- Unit can supply up to 5 indoor zones
- 36,000 Btu/h
- 105% capacity at -15°C

### D5CMHAH-48FAK

- Unit can supply up to 6 indoor zones
- 48,000 Btu/h
- 100% capacity at -15°C

## Discreet performance

Our Multi-zone systems give you unrivalled flexibility and optimum comfort in every room of the house. Control the temperature of each zone individually, according to your personal preferences. Enjoy a system that ensures the well-being of all family members, wherever they are in the house.

Wall unit  
**D5FSAH**

**A perfect balance between budget limits, energy savings and comfort**

This wall-mounted indoor unit combines the high-efficiency heating and cooling performance you need with the aesthetics you want.

These ductless systems are inherently economical. Individual rooms are heated or cooled only when necessary, and as the air is delivered directly into the space, no additional energy is required to move the air through the ductwork.

Available in 208/230V, this wall-mounted unit features four modes: Cool, Heat, Dry, Fan and Auto.

Floor console  
**D5FSFAH**

**The ideal complement to your new or refurbished space, the floor console offers quiet, warm and refreshing comfort.**

With five comfort modes, four fan speeds and state-of-the-art features such as automatic restart and Follow Me, which detects the presence of an obstacle, you'll be able to enjoy the comfort and convenience of your home temperature where the remote control is located, this new Console unit provides high-efficiency cooling and heating.

Heat and cool unused spaces with this high-efficiency indoor unit.

4-way cassette unit  
**D5FSCAH**

**Quiet. Efficient. Smart. This new cassette indoor unit meets all the requirements.**

The ductless system of the D5FSCAH series is reserved for Ceiling applications only. This selection provides creative solutions to design problems such as space expansion, special space requirements, where load changes cannot be handled by the existing system.

This cassette unit is the ideal addition to an air-conditioning system in spaces heated with hydronic or ductless electric heating.

1-channel cassette unit  
**D5FSOAH**

**This recessed cassette indoor unit allows versatile installation in confined spaces.**

This suspended cassette unit is designed to provide discreet heating and cooling. It is particularly ideal for converted spaces or room additions where traditional ductwork is not an option. Equipped with Follow Me technology, it can detect temperature at the remote control, ensuring precise climate control. In addition, it offers four different fan speeds, allowing airflow to be customized. Its adaptable design makes it an essential component for single or Multi-zone systems.

Vertical air handling unit  
**D5FSAAH**

**The air handling unit is a modular, configurable ventilation device that can meet all your needs in compliance with current standards.**

The indoor air handling unit is an adaptable ventilation solution that can be installed both horizontally and vertically than vertically. This unique device enables ductless systems to be connected to conventional systems with ducts, for both single-zone and Multi-zone applications.

A high-comfort solution that guarantees superior air quality.

# We are pioneers in the Canadian energy transition

With a network of over 100 certified dealers in Quebec and the Maritimes, Tempstar Canada offers the most complete range of air conditioning products and heating adapted to the Canadian climate.

[tempstarcanada.ca](http://tempstarcanada.ca)

**ENERTRAK**

**ENERTRAK is the exclusive distributor of  
TEMPSTAR Canada products for Quebec and the Maritimes.**

With its 7 warehouses spread across the country, Enertrak supplies and provides technical assistance to a network of dealers trained and coached by Enertrak teams of engineers and technicians throughout France since 1982.
